

ALCHOSEPT™

-  It's a "friction" hand disinfectant, of a new generation, what combines a comprehensive microbial effect with excellent protection properties and skin care.
-  Biocidal efficacy with remanent effect of 3 hours after application.
-  Provides hygienic hand disinfection in just 30 seconds
-  It is used for hygienic and / or surgical disinfection of hands by rubbing
-  Skin disinfection before injections, puncture, vaccines or blood harvesting.

Data of active substance according to the Delegated Regulation (EU) no. 1.062 / 2014 and REACH on the Registration, Evaluation, Authorization and Restriction of Chemicals:

Chemical name	Nr. CE	Nr. CAS	Concentration in metric units
Ethanol	200-578-6	64-17-5	85%

The classification of the biocidal product according to the legislation (Annex V of Regulation (EU) no. 528/2012)

Main Group 1: Disinfectants and biocides products

TProduct type according to BPR: TP1 - Products in this category are biocidal products used for human hygiene, applied on or in contact with human skin or with the skin of the head with the main purpose of disinfecting the skin or the scalp.

Field of use: Human hygiene.

Scope of application according to Order 1.082 / 731/2016: hygienic and / or surgical disinfection;

Type of disinfection according to Order 961/2016: hygienic and / or surgical disinfection.

Formulation: Hydroalcoholic solution.

Category of users: professional, industrial, population;

Instructions for use:

Method of application	Doze of solution	Usage mode	Time of action
Hygienic disinfection of hands	1x3 ml for 30 sec.	rubbing	30 sec – for one disinfection
Surgical disinfection of hands	3x3 ml for 180 sec.	rubbing	3 min – for one disinfection

KLINTENSIV® ALCHOSEPT is used in hygienic and surgical disinfection of hands in the medical field:

- For hygienic disinfection of hands: Apply 3 ml (a pump press) and rub hands for 30 seconds.
- For surgical hand disinfection: Apply 6 ml (two pump presses), rub hands for 120 seconds, then add 3 ml (another pump press) and rub hands for other 60 seconds.

We recommend removing jewellery or accessories from your hands before use. Prior to application, the skin of the hands should be dry. Apply the required amount of KLINTENSIV® ALCHOSEPT, depending on the purpose of use. The hands are rubbed in the front, palm on palm, then the palm alternates with the back of the hands. Carefully rub your fingertips, those that have the greatest contact with the patients and rub carefully and finger joints in the skin of the epidermis.

The product is tested according to SR EN 14885:2015 and has antimicrobial action:

Bactericidal	SR EN 1500, SR EN 13727; SR EN 12791
Levuricidal	SR EN 13624
Micobactericidal/Tuberculocidal	SR EN 14348
Virucidal	SR EN 14476

Opinion issued by the NATIONAL COMMISSION FOR BIOCIDAL PRODUCTS:
OPINION No. 4217BIO/01/12.24

Compatibility:

It has quick action, being an ideal product for frequent use in medical offices, between patients. Protective and moisturizing substances for the epidermis provide lipid balance to prevent dry areas and cracked skin after multiple uses over a relatively short period of time. Efficiency is maintained in the presence of protein organic materials (biocidal efficacy tests have been done in dirt conditions).

Packaging, transport and delivery:

The product is packaged in high density polyethylene bottles of: 0,028L / 0,055L / 0,06L / 0,08L / 0,1L / 0,125L / 0,15L / 0,2L / 0,25L / 0,5/ 1L / 5L e, which are labelled and sealed. KLINTENSIV® ALCHOSEPT is stored in clean, well-ventilated, closed rooms at temperatures between + 5°C la + 30°C.

The transportation is done by covered means of transport. Storage temperature: 5-30°C.

Shelf life: Under the specified storage conditions, the product is valid for 36 months from the date of manufacture/expiry date.

Precautions and recommendations:

Occupational health and safety rules for the handling and use of biocidal products shall be observed;

In case of accidental ingestion, the doctor's advice will be required by presenting the product label;

Fraze de precauție (P) conform Regulamentul (CE) nr. 1272/2008 privind clasificarea, etichetarea și ambalarea (CLP):

P210 A se păstra departe de surse de căldură / scânteii / flăcări deschise / suprafețe încinse. Fumatul interzis.

P233 Pastrați recipientul închis etanș.

P305+P351+P338 ÎN CAZ DE CONTACT CU OCHII: Clățiți cu atenție cu apă timp de mai multe minute. Scoateți lentilele de contact, dacă este cazul și dacă acest lucru se poate face cu ușurință. Continuați să clățiți.

P391 Colectați scurgerile de produs.

P403+P235 Ase depozita într-un spațiu bine ventilat. A se păstra la rece.

P501 Eliminați conținutul / recipientul în conformitate cu reglementările aplicabile.

Precautionary statements (P) according to Regulation (EC) 1272/2008 on classification, labelling and packaging (CLP):

H225 Highly flammable liquid and vapours
